

RADIOMEN

Radioman (RM). Radiomen serve aboard all ships and at all radio stations ashore, operating radios, radio direction finders, teletypewriters, and facsimile equipment; transmitting and receiving messages in international Morse code. The radioman makes adjustments and performs upkeep in equipment, and obtains bearings with radio direction finders. He or she stands watches on teletypewriters, voice radio, and telegraph circuits, and copies broadcasts and keeps required logs. He or she lubricates, cleans, and detects mechanical difficulties in radios and typewriters and rigs emergency antennas.
